Editor's Notes

Methodology

This study uses county-level export data to provide estimates of congressional district exports to China. Because some congressional districts include parts of the same counties, and because the county export data cannot be apportioned to the separate districts, the total of a state's estimated individual congressional district exports in this study may exceed the state's actual total exports to China. For state-level data, please see USCBC's report on state exports, available at http://www.uschina.org/public/exports/state_exports_2007.html.

Export Category Descriptions

"Other Manufacturing" is the category of exports created when the US Census Bureau suppresses data to protect individual businesses' confidentiality. When publishing data, Census includes all production figures in the aggregated "total manufacturing" data, but does not release specific figures for manufacturing subsectors with too few firms reporting. "Other Manufacturing," which can reflect suppressed data for more than one subsector, is calculated by looking at a congressional district's total manufacturing trade, and subtracting out the sum of all reported manufacturing subsectors.

The Census Bureau states that: "Industries in the Miscellaneous Manufacturing subsector make a wide range of products that cannot readily be classified in specific NAICS [North American Industry Classification System] subsectors in manufacturing. Processes used by these establishments vary significantly, both among and within industries.... Establishments in this subsector manufacture products as diverse as medical equipment and supplies, jewelry, sporting goods, toys, and office supplies."

Notes on the 2000-07 Edition of This Report

This year's edition of the US-China Business Council (USCBC) report on US Congressional District Exports to China differs from the previous edition in the following ways:

All data used for this and previous editions come from the US Census Bureau via the US Department of Commerce and the US International Trade Commission. For the 2007 edition, USCBC also used the US Census Bureau's USA Trade Online database. Any differences in the current edition compared to previous editions thus reflect minor Census Bureau adjustments and corrections.

In the 2006 edition, the growth rate of a congressional district's exports to the world included the growth rate of exports to China. This year, the growth rate of total exports to the rest of the world excludes China, to provide a clearer picture of the district's export profile.
