

US Congressional District Exports to China: 2000–09

111th Congress

THE US-CHINA BUSINESS COUNCIL
美中貿易全國委員會

Executive Summary

The US-China Business Council (USCBC) each year releases analyses of US exports to China to better inform the policy debate about China trade and its impact on the US economy. This report details export growth by congressional district; USCBC issued a report in April 2010 that tracks export growth by state.

The key findings from this year's district export report:

- A clear trend that began in 2000 continued in 2009: Districts' exports to China outpaced exports to the rest of the world. US exports to China have jumped 330 percent since 2000, while US exports to the rest of the world rose only 29 percent during the same period. China is the third largest market for US products, after Canada and Mexico.
- Exports to China outperformed in a tough year and contributed to growth and jobs in all congressional districts. US exports to China in 2009—in the midst of the global recession—were roughly equal to those in 2008, while US exports to the rest of the world dropped nearly 20 percent. Even in states that have had a mixed export story over the previous eight years, such as Vermont and Tennessee, exports from congressional districts to China generally grew faster than those to the rest of the world. In 174 districts, exports to China experienced positive growth from 2008 to 2009, while their exports to the rest of the world fell.
- Despite the difficult economic climate, 41 percent of congressional districts increased exports to China in 2009. Between 2000 and 2009, 393 congressional districts experienced triple-digit growth, and 395 congressional districts had triple-digit growth in manufactured exports alone.
- Contrary to common perceptions, congressional districts in states such as Ohio, Indiana, Michigan, and South Carolina also benefited from rapidly growing exports to China—including exports of manufactured goods such as electrical equipment, machinery, computers and electronics, transportation equipment, and other high-end products.
- As 2009 drew to a close, US exports to China picked up, setting monthly records in November and December. In the fourth quarter of 2009, quarterly exports to China exceeded \$20 billion for the first time. In 2010, exports to China continue to grow and outpace exports to other markets: In the first five months of the year, exports rose 39 percent.

Editor's Notes

Methodology

This study uses county-level export data to provide estimates of congressional district exports to China. Because some congressional districts include parts of the same counties, and because the county export data cannot be apportioned to the separate districts, the total of a state's estimated individual congressional district exports in some cases may exceed the state's actual total exports to China, though the county data adds up to the state's actual total. On the other hand, some districts' total exports to China may be understated, because county-specific information for a few products (such as waste and scrap, used merchandise, etc.) is not available. Nonetheless, the data presents the best reasonable estimate of the economic impact of exports on a congressional district.

This year's edition of the US-China Business Council's (USCBC) report on US Congressional District Exports to China follows previous editions' methodology for estimating district export data, but is now based on the US Census Bureau's County Business Patterns survey, which provides more extensive reporting of county-based data by sector. This survey avoids artificial underreporting of exports that would stem from data suppression to preserve confidentiality, which had become a particularly difficult issue for the five-year Economic Census, upon which previous estimates had been based. To present a consistent dataset, all export data has been revised from 2000 forward to reflect the change to the more accurate Census dataset.

For state-level data, please see USCBC's report on state exports, available at www.uschina.org/public/exports/2000_2009.

“Miscellaneous Manufacturing” and “Other Manufacturing” Export Category Descriptions

According to the Census Bureau, “Miscellaneous Manufacturing” includes a wide range of products that cannot readily be classified in specific NAICS [North American Industry Classification System] subsectors in manufacturing. Processes used by these establishments vary significantly, both among and within industries. Establishments in this subsector manufacture products as diverse as medical equipment and supplies, jewelry, sporting goods, toys, and office supplies.

“Other Manufacturing” is the category of exports created when the Census Bureau suppresses data to protect individual businesses' confidentiality. When publishing data, the Census Bureau includes all production figures in the aggregated “total manufacturing” data but does not release specific figures for manufacturing subsectors if too few firms remain after data is suppressed. “Other Manufacturing,” which can reflect suppressed data for more than one subsector, is calculated by looking at a congressional district's total manufacturing trade and subtracting out the sum of all reported manufacturing subsectors.

美中贸易全国委员会

Impact of Global Economic Downturn on US Exports to Top 10 Markets, 2009 vs. 2008

US exports to China outperformed exports to other markets during the global economic downturn.

US exports to China in 2009 were roughly equal to US exports to China in 2008.

US exports to other top US export markets fell significantly during the global economic downturn in 2009.

Several US sectors experienced growth in exports to China over the past year—including high-value manufacturing in the chemicals and transportation equipment industries.

US exports to China set monthly records in November and December 2009, with quarterly exports to China exceeding \$20 billion for the first time in the fourth quarter of 2009.

Note: Ranking is based on export data for 2009, comparing the top 10 markets for US exports. “Rest of world” is based on all combined exports to all remaining markets for US exports in 2009.
