

# US Congressional District Exports to China: 2000–10

112th Congress

#### **Executive Summary**

#### Exports to China are a vital part of the US economy

- Exports to China are a vital part of the US economic recovery—and of sustained economic health.
   China is the third-largest US export market, and it continues to expand rapidly. As a buyer of US goods, China ranks behind only Canada and Mexico—our two immediate neighbors with whom the United States has a free-trade agreement.
- Taking a longer view, total US exports to China from 2000 to 2010 rose from \$16.2 billion to \$91.9 billion, up 468 percent. Total US exports to the rest of the world increased only 55 percent during this period.
- The nearly \$76 billion increase in exports to China during 2000–10 exceeded growth in every other market for US goods and farm products. US exports to Canada and Mexico rose \$69.3 billion and \$52 billion, respectively. Brazil was a distant fourth with just a \$20 billion increase.
- President Barack Obama's National Export Initiative, announced in January 2010, aims to double
  total US exports by 2014—a target that requires a 15 percent annual growth rate over five years.
  China was among the countries that, in the first year of the initiative, provided more than twice
  the 15 percent annualized growth requirement. In fact, China is the only major US export market
  to have consistently met or exceeded the necessary rate since 2000.

#### Districts across the country are benefitting from exports to China

- A clear trend that began in 2000 continued in 2010: Districts' exports to China outpaced exports to the rest of the world. Out of 435 districts, 333 districts had higher growth in exports to China in 2010 than they did to the rest of the world.
- Exports to China contributed to growth and jobs in all congressional districts. In 2010, exports to
  China rose 32 percent—faster than export growth to any of the US top-five export destinations.
  Even in states that have had a mixed export story over the previous eight years—such as Maine,
  Wisconsin, and Tennessee—exports from congressional districts to China generally rose faster
  than those to the rest of the world.
- In 2010, 404 congressional districts (93 percent) increased exports to China. Between 2000 and 2010, 408 congressional districts (94 percent) experienced triple-digit growth.
- Contrary to common perceptions, congressional districts in states such as Ohio, Michigan, West Virginia, and South Carolina also benefited from rapidly increasing exports to China—including exports of manufactured goods such as electrical equipment, machinery, computers and electronics, transportation equipment, and other high-end products.

#### But more can be done to increase our exports

- Despite the substantial increase in US exports to China, America's share of imports into China has
  fallen to 7 percent from 10 percent in 2000, making the United States only the fifth-largest
  source of imports there. A worthy sub-goal of President Obama's National Export Initiative
  should be to reclaim a 10 percent share of China's imports by 2014. To help American companies
  accomplish this goal, policy makers should increase the capacity and resources of US trade
  agencies:
  - Foreign Commercial Service To help companies, especially small- and medium-sized enterprises, find more export opportunities;
  - o **Export-Import Bank** To make support of US exports to China its top priority;
  - Office of the US Trade Representative To better understand and remove market access barriers that restrict even greater US exports; and
  - State and Local Initiatives To support further engagement and business development between American and Chinese cities and states, where most business activity takes place.

#### **Editor's Notes**

#### Methodology

This study uses county-level export data to provide estimates of congressional district exports to China. Because some congressional districts include parts of the same counties, and because the county export data cannot be apportioned to the separate districts, the total of a state's estimated individual congressional district exports in some cases may exceed the state's actual total exports to China, though the county data adds up to the state's actual total. On the other hand, some districts' total exports to China may be understated, because county-specific information for a few products (such as waste and scrap, used merchandise, etc.) is unavailable. Nonetheless, the data presents the best reasonable estimate of the economic impact of exports on a congressional district.

This year's edition of the US-China Business Council's (USCBC) *US Congressional District Exports to China* report follows previous editions' methodology for estimating district export data. As with last year's report, it is based on the US Census Bureau's County Business Patterns survey, which provides more extensive reporting of county-based data by sector. This survey avoids artificial underreporting of exports that would stem from data suppression to preserve confidentiality, which had become a particularly difficult issue for the five-year Economic Census, upon which previous estimates had been based. To present a consistent dataset, all export data has been revised from 2000 forward to reflect the change to the more accurate census dataset.

For state-level data, please see USCBC's report on state exports, available at www.uschina.org/public/exports/2000\_2010.

### "Miscellaneous Manufacturing" and "Other Manufacturing" Export Category Descriptions

- According to the Census Bureau, "Miscellaneous Manufacturing" includes a wide range of
  products that cannot readily be classified in specific North American Industry Classification
  System (NAICS) subsectors in manufacturing. Processes used by these establishments vary
  significantly, both among and within industries. Establishments in this subsector
  manufacture products as diverse as medical equipment and supplies, jewelry, sporting
  goods, toys, and office supplies.
- "Other Manufacturing" is the category of exports created when the Census Bureau suppresses data to protect individual businesses' confidentiality. When publishing data, the Census Bureau includes all production figures in the aggregated "total manufacturing" data but does not release specific figures for manufacturing subsectors if too few firms remain after data is suppressed. "Other Manufacturing," which can reflect suppressed data for more than one subsector, is calculated by examining a congressional district's total manufacturing trade and subtracting out the sum of all reported manufacturing subsectors.

#### Growth in US Exports to Top 10 Markets, 2000-10

#### US exports to China far outperformed exports to other markets.

- US exports to China since 2000—the last full year before China's entry into the World Trade
  Organization—have risen at a significantly faster rate than US exports to any other major export
  market. Computers and electronics, crop production, chemicals, transportation equipment, and
  non-electrical machinery were the largest US exports to China last year.
- Growth in the other top US export markets in the 2000–10 period has been significantly slower.
- Comparing growth in the value of exports between 2000 and 2010, China was the largest contributor to export growth of any US trading partner. US exports to China in 2010 were \$75.7 billion higher than in 2000. Canada and Mexico followed with increases of \$69.3 billion and \$52 billion, respectively. Brazil was a distant fourth with just a \$20 billion increase.

Note: Ranking is based on export data for 2010, comparing the top 10 markets for US exports. "Rest of World" calculation is based on all combined exports to all remaining markets for US exports in 2010.

#### **Top-Five PRC Import Sources, 2010 (\$ billion)**

#### The United States is only China's 5th-largest source of imports.

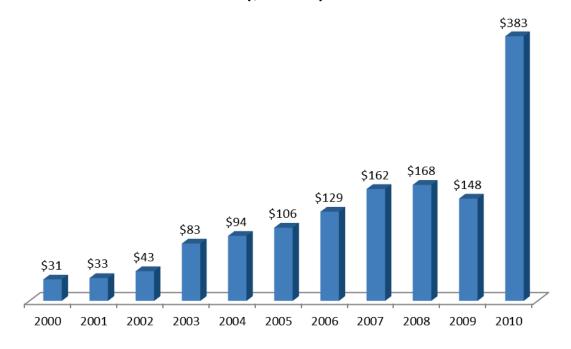

- Taiwan, South Korea, the European Union, and Japan all export more goods to China than the United States.
- Despite substantial increases in US exports to China, the US share of PRC imports has fallen to 7 percent from 10 percent in 2000. A worthy sub-goal of President Obama's National Export Initiative should be to reclaim a 10 percent share of China's imports by 2014.
- To accomplish this goal, policy makers should increase the capacity of US trade agencies:
  - Foreign Commercial Service To help companies, especially small- and medium-sized enterprises, find more export opportunities.
  - Export-Import Bank To make support of US exports to China its top priority.
  - Office of the US Trade Representative To better protect American interests by challenging additional market access barriers that restrict US exports.
  - State and Local Initiatives To foster business development between American and Chinese cities and states in order to promote export and job growth.

Source: PRC General Administration of Customs

<sup>\*</sup>Note: The value of PRC imports from the United States is higher than US exports to China because of several data discrepancies between US and PRC trade statistics, including shipping costs, methodological differences, and tariffs that are applied as goods pass through other customs territories on their way to China.
